

# SULPHUR RECOVERY PROJECT

(2008)

## LOCATION

Fort McMurray, Alberta, Canada

## DIRECT HOURS

210,000

## SCOPE

- Constructability review with engineering firm
- Construction budget development with contractor
- Site electrical and controls construction execution, including:
  - Power 1-15 kV
  - Process controls
  - Lighting
  - Heat tracing
  - Grounding
  - Project controls
  - Material procurement
  - Pre-commissioning
  - Construction tools and equipment

## PROJECT OVERVIEW

Braid supported the EPC with a constructability review and construction budget preparation while providing skilled trades and supervision to deliver 210,000 hours of direct electrical and control systems installation. The field activity was supported with a full complement of safety, QA/QC, material procurement and project controls.
